

# Hunter's Star

abbreviated to HStar in the design name – put this into the 'name' filter on website

- all of these designs are in the form of p2p triangles
- they can be placed extremely accurately and
- you can travel a long way with very few start/stops and therefore fewer tie-offs.

*These triangle patterns can be used as triangle patterns in all sorts of other places as well!*

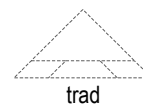

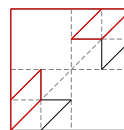

There are many differently proportioned Hunter's Star blocks

If you are custom quilting these blocks, you will want each of the design elements to fit nicely into their own areas  
I have included abbreviations in their names according to how the piecing was done – FIND THIS OUT BEFORE QUITING!!

In each of the product details on the website, there is a link for you to download patterns which are the outlines of these blocks.  
Use these outlines to check more closely which proportion your block is.

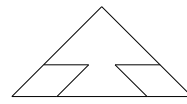

Contact me to draw a variation if you require it

## Quilting Plan for Hunter's Star

Using the same design for the border often works very well and ties the whole thing together.
